

Chemistry Department - Extra Curricular activities

In recent years the chemistry department has been successful in a number of competitions run by Companies such as the Royal Society of Chemistry and the Salters Company.

In Y7 and Y8 there is a thriving Science Club which meets weekly and at times has input from chemistry staff doing various practical and demonstration activities.

In addition to these we have also sent Y10 students on residential trips through the Salters Chemistry Camps run at University campuses around the country.

In the sixth form students are given the opportunity to be entered for the Advanced Extension Award paper in chemistry. This is a paper which examines the same chemistry content as the A-level but the questions are of a much higher demand. We also offer entry into the International Chemistry Olympiad for the most able of our Y13 students.
